Industrial Technology Partner to the Fortune 1000

C-Square Module

Compact 90-Degree Power Turn Conveyor

C-Square Conveyor Module

FLEXIBLE AND COMPACT MATERIAL HANDLING SOLUTIONS

At JMP our innovative material handling solutions are developed based around a modular approach through which we combine a series of compact, efficient modules in order to deliver the most efficient and effective system for your unique process and footprint. One innovative and effective component to our integrated material handling solutions is our dual roller segment C-Square 90 degree turn module. The combination of the independently powered skewed infeed roller section and straight outfeed roller section allow for a number of 90-degree diversion applications such as mainline merge, offline parallel spur or compact S-bends within an extremely compact envelope. C-square also facilitate combination where two modules can accomplish a 180-degree curve in considerably less space than a standard radius curve arrangement.

C-Square Conveyor Module

FLEXIBLE AND MODULAR

Infeed and outfeed components can be mated up to C-Square modules in a variety of configurations based on your specific application, corporate standards and SOPs. Modular arrangement allows for quick layout changes as your operations and process grow and evolve.

INDEPENDENT CONTROL

Each independently powered MDR roller segment is controlled by its own power card allowing for differential speed settings between straight and skewed roller zones. This level of control delivers the ability to create specified gaps between parcels or to adapt infeed and outfeed speeds to existing conveyors in each position.

COMPACT FOOTPRINT

C-square modules turn cases in a fraction of the space required by traditional sweeping curves. While the radius of a typical 90-degree curve occupies over 16 sqft, a C-square has a footprint of under 6 sqft. A pair can accomplish a full 180-degree diversion in under 60" saving over 20 sqft and reducing footprint by over 80%.
