Industrial Technology Partner to the Fortune 1000

Postal and Courier Integrated Material Handling Solutions

**Distribution Center Bulk Parcel Handling and
Sortation Solutions**

Parcel and Courier Services Integration Competency

JMP Solutions has deep roots spanning over 2 decades in the postal and courier services industry. From material sorting, handling and tracking to data driven process optimization, bottleneck reduction and labor / asset allocation, we are your full-service automation and integration partner.

At JMP there is no such thing as a standard or "off-the-shelf" system. We build to spec ensuring that we meet your exact corporate standards and design requirements unique to both your process and your organization. We differentiate an otherwise common material handling architecture by ensuring that your design specifications are front and center of our design and build processes from the very start, as opposed to trying to adapt to your specific needs as an afterthought.

We not only support you through the duration of the project, we support you through the lifetime of the system and beyond as your business operations grow and evolve. Let us show you how we can help redefine the limits of what you may have thought was possible for your business.

Our scope of capabilities is limitless. The following examples are some common systems that we are highly experienced with and provide value to those otherwise standard systems through attention to design detail and exceptional service.

PORTABLE BELT INCLINE

The flexible design of our PBI conveyors allow for the handling of non-standard package geometry. Lightweight, adjustable design coupled with a standalone control system and standard outlet allows for free movement throughout the facility. Quick setup and flexible load / unload applications are key benefits of these conveyor modules.

GRAVITY EXTENDABLE

Both compact and adjustable, our gravity extendable conveyors are extended to the required position into waiting truck allowing the easy and ergonomically friendly loading of loose packages. As the truck fills, the unit is collapsed back as needed. Combination with a PBI in various configurations allows for simultaneous unload if required.

MODULAR ROLLER CONVEYANCE CARTS

These easily portable and connectable roller segments offer a uniquely modular conveyor setup in order to establish various need-based configurations on-the-fly for package movement and sortation. Straight run and curved segments can operate in transport or accumulation mode and can be coupled with modular chutes and ball tables as required.
