

Overall Equipment Effectiveness (OEE) Self Assessment

JMP can offer several solutions to greatly impact the bottom line. For an OEE project to succeed, it is necessary to approach the business problem and potential OEE solution using a systematic approach. Based on executing hundreds of MES and IOT projects, we know that OEE is a great starting point for improving throughput, quality, and reducing costs. This self-assessment scorecard aids engineers at End-Users in determining risk, complexity, and change management opportunities (people, processes and tools) and should be completed while speaking with a JMP Subject Matter Expert.

Please rank your responses on the next page from 1-5 with 1 representing strongly disagree and 5 being strongly agree.

Scoring:

40-50: You're well in control of your process. Let us know if we can help in the future.

35-39: Room for cost reducing process efficiency improvements. Call JMP to help.

10-34: High degree of process inefficiency and operational risk factors. Call JMP to help.

	1	2	3	4	5
1. We have easily accessible, valuable, historical information for process improvement and quality control.	1	2	3	4	5
2. We maximize the value of the data we collect to reduce operating costs.	1	2	3	4	5
3. We have capital support in place to regularly implement data collection initiatives.	1	2	3	4	5
4. We have defined our long-term information and data architecture needs in order to meet regulatory and corporate goals.	1	2	3	4	5
5. The information we need to make decisions is always available in a timely fashion.	1	2	3	4	5
6. We can verify that our assets are being fully utilized with accurate information.	1	2	3	4	5
7. We regularly execute recall scenarios to prove that our data is readily available and accurate.	1	2	3	4	5
8. The flow of production related information is seamless between our automation system and business system.	1	2	3	4	5
9. Lot/batch tracking information is available for proactive actions if crisis scenarios occur.	1	2	3	4	5
10. We have the right information available to make production decisions.	1	2	3	4	5
